

New Sharp electronic cash register offers touch screen hospitality

Sharp Corporation of Australia has announced the release of the UP-810F electronic cash register featuring a 6.5" TFT colour LCD touch screen. This purpose built, point-of-sale (POS) terminal is uniquely designed for use in restaurants, cafeterias, bars, pubs and other food and beverage service outlets.

Boasting all the functionality required for busy catering situations, the UP-810F is backed by Sharp's technologically advanced software, ensuring the reliability and flexibility to service even the most demanding hospitality markets – and all at the touch of the easy-to-use LCD screen.

Operator friendly and easy to use, the UP-810F's convenient tilt angled LCD screen features up to eight lines of information at a time, delivering quick confirmation of sales items, prices and other relevant data.

The brightly lit screen accommodates 15 coloured touch keys with the added advantage of programming to be context sensitive, effectively freeing up valuable key allocations on the register's 144 key flat keyboard.

A new and welcomed feature of the UP-810F is the SD card function which allows the user to load program data into the unit, collect sales data and save electronic journal data.

Other standard features include a large LED customer display, four serial ports plus an Ethernet port for in-line communication. The register can also support up to two cash drawers.

Programming the UP-810F is simple and straightforward, especially for customers upgrading from Sharp's UP700 and ERA771 models. Menu guided programming and macro keys can be set to take you straight to the programming area selected.

The UP-810F also comes with a host of optional extras such as the UP-S04MB2 memory board which extends memory by 4Mb and increases PLUs from the standard 1000 to a maximum 65,000. Other options include a magnetic card reader, pole display, extra drawer and contactless clerk key.

The Sharp UP-810F is available now at the \$RRP \$3,199.
