

Sharp/LCD projector XR-32S – 02.04.08

**New Sharp True SVGA projector puts the focus on picture quality**

Sharp Corporation of Australia has announced a new SVGA multimedia projector which offers outstanding brightness and contrast ratios, with high definition capabilities for viewing enjoyment and presentation efficiency. The Sharp XR-32S offers superior image quality in its class boasting 2500 ANSI lumens high brightness and true SVGA (800 x 600) resolution.

Compact and lightweight, the XR-32S is exceptional when it comes to presentation assist functions offering remote control for page up/down, GUI pointer, spotlight and optionally computer mouse control. Screen sizes range from 102cm up to 762 cm with an impressive contrast ratio of 2000:1. For users' convenience and flexibility of installation the XR-32S features keystone correction for up to 20 degrees angle adjustment.

Sharp also puts the focus on viewer comfort by ensuring low fan noise of just 29dB in eco and quiet mode and 32 db in bright mode. The exhaust system has been placed on the front panel to avoid viewer distraction through fan noise or airflow.

The XR-32S design based on DLP® technology, delivers uniform colour reproduction capabilities and high quality pictures for a longer period of time. Maintenance issues are effectively minimised thanks to the projector's DLP® sealed system and filter-free lamp construction. New lamp design with its excellent dust resistance, replaceable by user and long lifespan up to 4,000 hours, contributes to projector low maintenance cost and its extended use.

When it comes to connectivity, the multimedia XR-32S boasts a range of interfaces enabling connection with a variety of Audio Visual devices. Terminals include computer/component (HD15), S-Video, video (RCA) and audio, as well as control and communication sockets: USB (type B) and RS-232C.

Security and safety features incorporate theft deterrent functions including system lock with key-code start up and Kensington security standard connector, as well as a key lock function that prevents the projector operation without the remote control.

The Sharp XR-32S multimedia projector is available now for RRP \$1299.
