

Sharp's new LCD projector provides fixed and portable business solutions

Sharp Corporation's new True XGA Portable LCD Projector, the XG-C435X offers convenient solutions for both conference room applications and mobile business needs.

With its compact body the Sharp XG-C435X is ideal for both fixed and portable applications with benefits including easy installation, low maintenance and simple operation. Portability is further enhanced with a side carry handle plus inbuilt damage protection offered by the projector's recessed lens.

The XG-C435X convenient size does not compromise the quality. The main selling point is the superb image quality and excellent clarity thanks to native XGA resolution (1024 x 768) and high 4000 ANSI lumens brightness - particularly useful in brightly lit office environments.

Screen sizes range from 102cm up to an impressive 1,270cm (500 inch) with an easily replaceable lens system that includes a standard 1:1.2 zoom lens as well as four optional exchangeable lenses.

Another important feature of the XG-C435X is the Sharp Unique Network System, enabling web browser control such as remote access and management, diagnosis and auto email alert as well as a service and support link, all via inbuilt firmware. Further network control options are available by downloading Sharp Display Manager onto the main computer from the Sharp Global website.

When it comes to connectivity, the XG-C435X has a wide variety of interfaces including a DVI terminal compatible with conventional players and computers and various video and composite inputs as well as two stereo audio inputs.

Security and safety are assured thanks to the projector's Notevision security pack featuring system lock function with key-code start up, network surveillance system, ceiling lock mechanism and Kensington lock. Other useful features include the direct power off function and low fan noise in a quiet mode.

The Sharp XG-C435X is available now for RRP \$4799 with a standard lens included.
